

# PRESSURE TESTER

## Technical Description:

The pressure test unit is used for easy manual leakage test of mould circuits. The unit has a built-in water tank, and connected hose, and two valve handles to regulate the pressure into and out of the system.

The system can be used for easy leakage test of mould circuits.

For normal tap water systems, like for drinking water, it is normal to use a pressure tester at 15 bar as a leakage test.

## Properties:

Dimensions: 190 X 530 X 305 mm  
Tank volume: 12 L  
Output connection: R 1/2" Female BSPP  
Max temperature: 50°C  
Max pressure: 60 Bar  
Approved Test liquids: Water, Petrol
